During my time at Lane Forest the Offsite Supervisor and I worked together to update and automate reports related to the Offsite Production crew. Displayed above are two revenue reports which are presented to stakeholders during their monthly meetings.

By automating this Offsite Production spreadsheet, a task which used to take a couple hours has now become a task which takes less than 15 minutes to complete. Furthermore, because of how the data is now stored, I can utilize visual aids and BI software to answer stakeholder questions.
